

**TIME THE FUTURES MARKET WITH AMAZING ACCURACY BY
TRADING WITH THE INSTITUTIONS WITH ONE SIMPLE SETUP!**

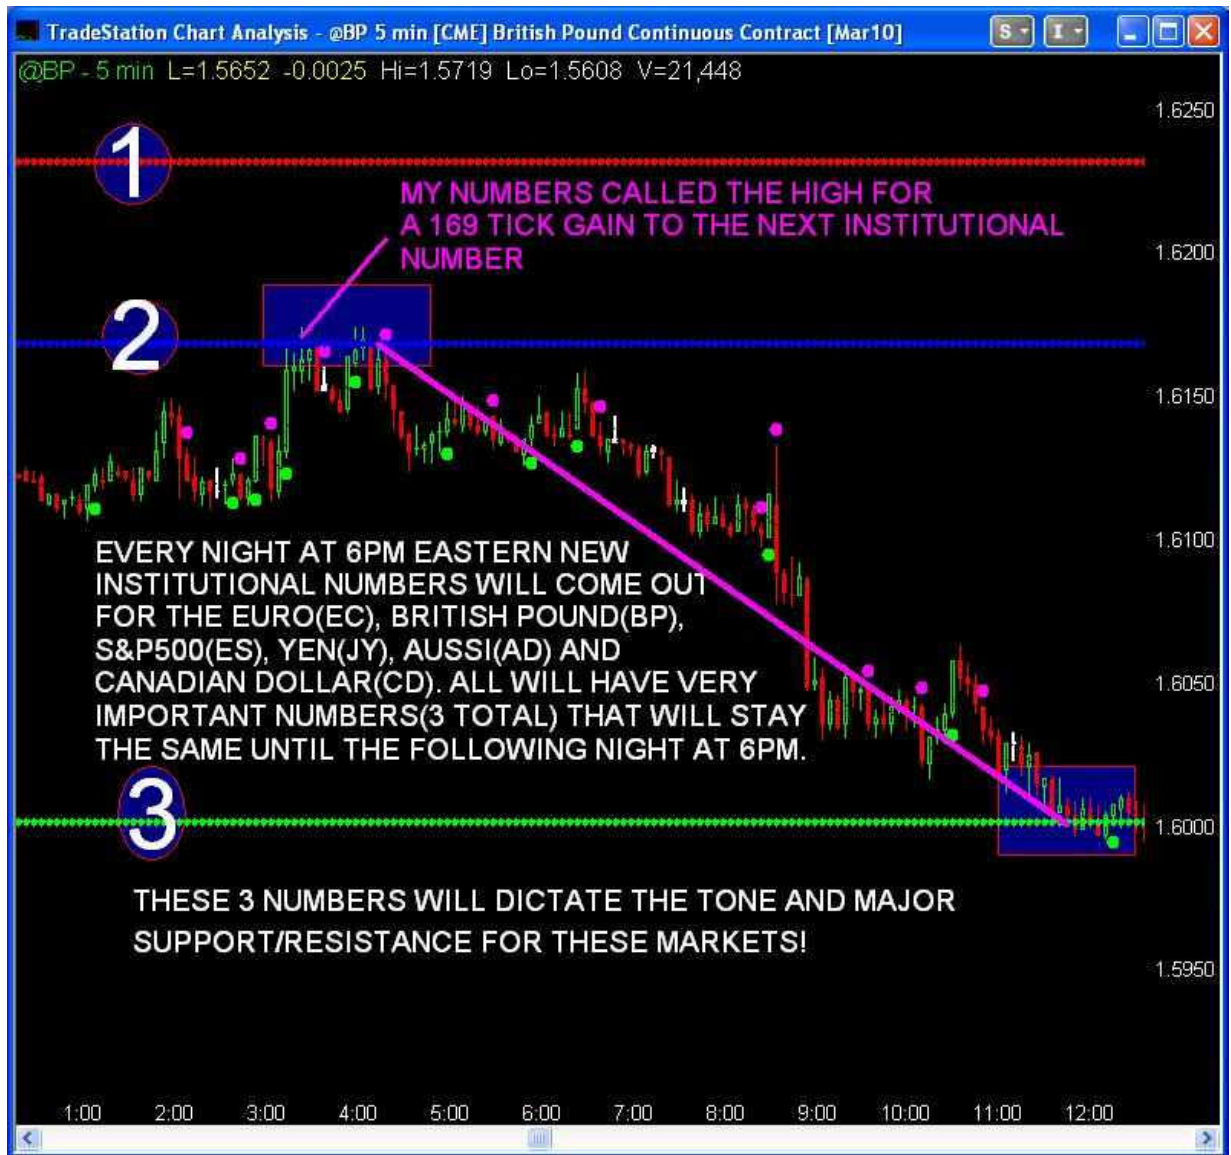

Remember, before moving on please read my two pdf's and view my Part 1-4 video series to understand how you will use both the omnivia and gatherplace room together to view and execute trades. This pdf will go over my top setup in the room

Here is the link: www.daytradingthefutures.com/Jump%20Start.html

In my nearly two decades as a day trader, I've seen a ton of market analysts with many different approaches used to time market turning points. Most often 90% of these approaches lead to greater confusion and the results were simply terrible. The other 10% were good in trending markets and horrible in choppy markets. As an individual trader, the tools and indicators at your fingertips are in the thousands. Even with all these holy grail indicators, the fact remains that the public is almost 90% wrong in the futures and options markets. We know that the market is a zero sum game. It is simply just a transfer of wealth from one individual to the next. This is what keeps the markets liquid. Simple supply and demand. When there is a winner then there has to be a loser. The market itself is not a living, thinking being. The market is just there. It does not care if you succeed or fail. So many novice traders talk to the market as if the market is out to get them. "Why does the market keep taking my stops?" How many times have I heard that over the years. You can buy or sell anytime you like at the current going price. Once you understand this then you can make high probability trades without involving your emotions. So we know the market is not out to get us. So who is?

It's the Institutions! What do they know that you don't? Do they have a competitive advantage over you? Yes. They need the public to lose in order to gain. Remember, it's not the market against you its the institutions, hedge funds and elite traders. How would you like to trade with them instead of against them? How would you like to trade the exact turning points that they do. You can and I'll show you just one simple setup how you can turn you computer into a daily ATM machine by just trading these three levels that I update every night six days a week. I have the same calculation in my trading room that some of the top money managers and hedge funds use. These are the levels that will call the highs and lows on a daily basis and you will have these levels Sunday night through Friday night at 6pm eastern. Is it coincidence that my trading room calls these highs and lows on a daily basis? No. My levels are the same levels that these top institutions have been using for almost 4 decades now. You will now be trading with the institutions and not the public. Let's get started on the single most powerful setup that you will ever come across. Ever!

The key to trading successfully on a consistent basis is having a high probability setup that is easy to see and execute way in advance. I have done that for you. A very simple approach to a very powerful setup. You will know exactly when to enter, where to stop out and how to trail your winning trade. I have 3 powerful setups in my trading room and this one is by far my top one. Let's break down the charts.

Created with TradeStation

Ok! Now you know that the institutional numbers are very important in determining major support/resistance. When you log into both trading rooms you will see these numbers change every night at 6pm eastern and are good until the next trading day at 6pm eastern. They will be posted under the announcement tab in omnivia room and they automatically update in the gatherplace room as blue, green and red plus signs (+++++).

Very simple. When the 3 new numbers are posted you will trade at those levels of major support/resistance. Ok! Let's break this down and I'll show you how to enter the trades off the 1 minute chart. Remember, please review my top 3 setups pdf and how I use the omnovia(macro) to get the tone and how I post the blue number one institutional number on my papa chart with a yellow solid line nightly. This is the same blue number on the one minute chart. Let me show you how to get enter, stop out and trail in the following charts. Very powerful!

1. ENTER ON RETEST OF BLUE INSTITUTIONAL NUMBER. LET IT RETEST THEN ENTER WITH MAGENTA SELL DOT. ONCE YOU BECOME A MEMBER YOU WILL SEE CONFLUENCE AT THESE NUMBERS AND CAN SELL RIGHT AT THE NUMBER. STOP BEING ONE CANDLE CLOSE ABOVE THE INSTITUTIONAL NUMBER. THE DOT WILL BE USED FOR BEGINNERS. HITTING THE NUMBER IS THE BEST WAY TO ENTER WITH OR WITHOUT THE

DOT AFTER A BREAKDOWN AND RETEST OR A RETEST.

2. STOP WILL BE EITHER/OR WHICH EVER COMES FIRST. ONE WHOLE CANDLE CLOSE ABOVE BLUE LINE OR OPPOSITE GREEN DOT WITHIN 3 CANDLES AFTER ENTRY.

3. TARGET WILL BE NEXT INSTITUTIONAL NUMBER. YOU MUST FIRST SCALE CONTRACTS AT FIRST CYAN DOTS IF SHORTING OR PURPLE DOTS IF YOU ARE BUYING OR LONG. YOU CAN THEN PUT THE REST OF YOUR CONTRACTS 2 TICKS ABOVE THE HIGHEST HIGH AT BREAKDOWN OR BREAKEVEN. AFTER YOUR FIRST SCALE THE MARKET CANNOT CLOSE ONE WHOLE CANDLE ABOVE THE INSTITUTIONAL NUMBER OR YOU MUST EXIT ALL CONTRACTS. KEEP SCALING CONTRACTS AT CYAN DOTS WHEN SHORT UNTIL YOU HIT THE NEXT INSTITUTIONAL TARGET. YOU SHOULD ALWAYS HAVE A FREE TRADE ON YOUR HANDS AFTER THE FIRST SCALE.

LET'S LOOK AT SOME MORE CHARTS TO MAKE THIS REAL CLEAR.

Created with TradeStation

This was a breakout/retest long. Entry was green dot or right on number if you see confluence. Stop will be whole candle close below line or opposite red dot in three bars. I prefer whole candle close so the market has to take me out. First target on long will be purple dots. Then you can place the rest of your contracts 2 ticks below lowest low for more scaling on the purple dots on the way up to the ultimate next institutional target. Remember, I also scale off rolling pivots or fibonacci's on my papa chart

after I hit my first scale dots. This works on all markets. You can just sit back and wait for these numbers and trade this method. Very Powerful!

Remember, when the market breakouts or breakdown from the blue, red or green numbers I want to see a retest. Sometimes, if the market is weak it will go sideways for a series of bars then give you the dot to get in.

Created with TradeStation

You can clearly see that the numbers stop the markets. When broken it tells the trader to take the first retest for a big move. One point is that the blue number will get the market moving for the trend. The other two numbers will contain the market for retest shorts or longs. When above or below all three, blow off rallies or selloffs occurs. See below!

Remember, the market should contain itself within the outer numbers. The blue number break will get the market in motion. Once you break out of all three then watch out for a huge move.

I only use the 15 and 5 min chart for the S&P500. With my fibs levels and rolling pivots with the institutional numbers it becomes a very powerful system trading the S&P500 futures. However, the currency market is where the money is. Small stops with large moves.

You will see numbers below my 1 minute charts. I will be adding the 5minute numbers soon. They will help you to time your trade on

support/resistance areas. They work really well when retesting an institutional number with a sell/buy 9 or 13 number. You would enter the same way as I described above.

Remember, use the dot on the retest of the numbers to enter and a whole candle close above the number will be the stop out. Once you get good at

confluence you can buy/sell right on the number.

The key is to trade the institutional numbers. I'm in the room M-F 9:15-11:15am eastern to go over the same setups over and over. Trade with them not against them. I'll see you in the room. Jay
